SUMMARY

Software Engineer with 6+ years of experience designing and building RESTful and GraphQL APIs, microservices architectures, and scalable SaaS products. Specializes in Node.js, NestJS, React, Laravel, and SQL, with hands-on experience in system migrations, third-party API integrations, and database performance optimization. Led backend development across the full lifecycle, from technical scoping to deployment and mentoring junior engineers.

CORE TECHNICAL SKILLS

- Node.js/Express
- Nest.js
- JavaScript
- Typescript
- GraphQL API
- Supabase
- Rest API
- NoSQL (MongoDB)
- SQL/PostgreSQL
- Microservices
- React
- Docker
- Laravel/PHP
- Docker
- Amazon S3
- Git
- API Testing (Postman)
- Unit Testing (Mocha/Chai)

SKILLS & EXPERIENCE

Freelancing

Jan 2025 – Present

- Gathered client requirements, prepared proposals, and shipped full-stack web products with end-to-end testing, cutting project delivery time by ~30%.
- Integrated OpenAI API, Eleven Labs, and EmailJS across 3–4 client projects, enabling AI-driven features and automated communication workflows that reduced manual effort, minimized errors, and improved delivery speed.

InvoZone

Jan 2022 – Dec 2024

- Led feature development across 5+ multi-tenant client products, collaborating with cross-functional teams to consistently meet sprint deadlines.
- Authored 100+ test cases and performed manual testing, reducing post-release bug reports by ~40% across key client accounts.
- Executed client test tasks for onboarding and coordinated between development and client teams to identify and fix bugs, resulting in fewer post-handover defects.

Programmers Force

Sep 2018 - Dec 2021

- Designed RESTful APIs with Docker and migrated databases from MySQL to PostgreSQL, improving query performance by ~35%.
- Migrated a monolithic CodeIgniter codebase to Laravel and integrated 5+ third-party APIs (Dectra, Twilio, SendGrid, Ekata, Quantoz Nexus).
- Mentored 3 junior developers, managed user story planning, and maintained technical documentation that reduced onboarding time for new engineers by an estimated 20%.

Zin Technologies

Jan 2018 - Aug 2018

- Contributed to RESTful API development for an HR system using Laravel, Vue.js, and jQuery, participating across all SDLC stages and delivering the module within a 7-month timeline.

PROJECTS

Proposaly AI — [proposly.ai](#)

Built an AI-powered proposal writing platform using Bolt.new, Supabase, React, and Skipcash, cutting drafting time by ~60%.

Stack: Bolt.new , Supabase , React , Skipcash Payment Integration (Skipcash)

RetailIQ — AI sales coaching platform

Engineered and launched a sales training platform using Bolt.new and Supabase, developing Eleven Labs voice agents that simulate real customer interactions for onboarded users, covering objection handling, upselling, and closing skills, replacing the need for live coaching sessions.

Skills: Bolt.new , Supabase , React, Eleven Labs API , OpenAI API , Payment Gateway Integration (Stripe).

RollsUp | rollup.ai/

Architected a backend platform for complex hardware development workflows, reducing system integration time by ~25% through microservices architecture and streamlined API design.

Skills: Node.js , NestJS , PostgreSQL , Microservices, Docker , Unit Testing , Mocha , Technical Documentation , Amazon S3 , TypeScript , TypeORM , OAuth.

GreyHound Racing

Delivered a real-time blockchain-based dog racing game with smart contract integration on Ethereum, handling concurrent users and on-chain transactions with under 2s average response time.

Skills: Node.js , MongoDB , Redis , Team Management , Database Management , React.js , Web3.js.

EDUCATION & CERTIFICATIONS

Bachelor of Computer Sciences

2013-2017

Majors: Computer Sciences

Government College University Lahore

MongoDB Essential Training

Apr 2026

LinkedIn Learning · Issued April 2026
